

CRIBSCAN

Inventory Management

To meet the ever-changing needs of our customers, we have created an inventory management service. This onsite service uses modern scanning technology to track inventory levels.

Our CribScan specialists work with you to determine what products need to be kept on hand, as well as maintain optimal inventory levels through delivery and stocking programs.

Suburban Bolt and Supply can lower your costs and streamline your operations without the investment of maintaining a large inventory. We offer custom levels of implementation from a few items to a complete MRO vendor-managed inventory system.

"Now that we're using CribScan, our people have more time to process orders. I can't imagine going back to the old way of managing our inventory!"
